

AIM : Implement your own ping program

Algorithm:

- 1) Create a UDP socket
- 2) Set a timeout of 2 seconds
- 3) Record start time
- 4) Send the message "ping" to the server
- 5) Wait to receive a response from the server
 - * If received, record end time and display the reply with round-trip time
 - * If timeout occurs, print "Request timed out!"
- 6) Close the socket.

Input

```
import socket
import time
def ping_server(host = '127.0.0.1', port = 12345):
    with socket.socket(socket.AF_INET, socket.SOCK_DGRAM) as s:
        try:
            s.settimeout(2)
            start = time.time()
            s.sendto(b'ping', (host, port))
            data, addr = s.recvfrom(1024)
            end = time.time()
            if "Received" in data.decode():
                print(f"Received {data.decode()} from {addr} in {end - start:.2f} seconds")
            else:
                print("Request timed out!")
        except socket.timeout:
            print("Request timed out!")
```

```
if name == "__main__":
    ping_server()
```

Output:

```
Received Pong from ('127.0.0.1', 12345) in
0.00 seconds
```

Request timed out

Experiment 13 b

Algorithm:

```
import socket
def start_server(host = '127.0.0.1', port = 12345):
    with socket.socket(socket.AF_INET, socket.SOCK_DGRAM)
        as s:
            s.bind((host, port))
            print(f"UDP server running on {host}:{port}")
```

while True:

```
    data, addr = s.recvfrom(1024)
    print(f"Received message from {addr}:"
          f" {data.decode()}")
    s.sendto(b'Pong', addr)
```

~~if name == "__main__":~~

~~start_server()~~

output

UDP server running on 127.0.0.1 : 12345

Received message from ('127.0.0.1', 52345)

Ping.

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

127.0.0.1 -> 127.0.0.1: 12345

Result : Thus the ping program has been implemented successfully.

Well done
